Author Index to Volume 1

References with (E) indicate Errata. Volume number (boldface) and year are included in this index. It will be noted that there are no references to "see someone else" in the Author Index. Although it has meant a little duplication, there has been included under each author all articles in which he was author or co-author. All articles in which the author has participated are arranged in the chronological order of publication. A bibliography with author names arranged as in the original article is obtained by insertion of the author's name in the indicated (——) space under each indexed name.

Aaron, Ronald and Abraham Klein. Convergence of the Born expansion. 1: 131—1960

Acharya, R. and E. C. G. Sudarshan. "Front" description in relativistic quantum mechanics. 1: 532—1960

Albertoni, S., P. Bocchieri, and A. Loinger. New theorem in the classical ensemble theory. 1: 244—1960

Araki, H. Hamiltonian formalism and the canonical commutation relations in quantum field theory. 1: 492—1960

Arnowitt, R., S. Deser, and C. W. Misner. Consistency of the canonical reduction of general relativity. 1: 434—1960

Backus, George. Linearized plasma oscillations in arbitrary electron velocity distributions. 1: 178; 559(E)—1960

Bellman, Richard, Robert Kalaba, and G. Milton Wing. Invariant imbedding and mathematical physics. I. Particle processes. 1: 280—1960

Bergmann, Otto. Problem of Rainich for two-component spinors. 1: 172—1960

Bernstein, B. Proof of Carathéodory's local theorem and its global application to thermostatics. 1: 222—1960

Bocchieri, P.
Albertoni, S., ——, and A. Loinger. New theorem in the classical ensemble theory. 1: 244—1960

Buchdahl, H. A. On the nonexistence of a class of static Einstein spaces asymptotic at infinity to a space of constant curvature. 1: 537—1960

Coldwell-Horsfall, Rosemary A. and Alexei A. Maradudin. Zero-point energy of an electron lattice. 1: 395—1960

Cutkosky, R. E. Singularities and discontinuities of Feynman amplitudes. 1: 429—1960

da Silveira, Adel. Kemmer wave equation in Riemann space. 1: 489—1960

de Heer, J.
Löwdin, P. O., R. Pauncz, and ——. On the calculation of the inverse of the overlap matrix in cyclic systems. 1: 461—1960

Deser, S.
Arnowitt, R., ——, and C. W. Misner. Consistency of the canonical reduction of general relativity. 1: 434—1960

Ehrman, J. R., L. D. Fosdick, and D. C. Handscomb. Computation of order parameters in an Ising lattice by the Monte Carlo method. 1: 547—1960

Epstein, H. Generalization of the "edge-of-the-wedge" theorem. 1: 524—1960

Erdélyi, A. Asymptotic solutions of differential equations with transition points or singularities. 1: 16—1960

Fano, U. Real representations of coordinate rotations. 1: 417—1960

Finkelstein, R. Spacetime of the elementary particles. 1: 440—1960

Fivel, Daniel I. and Abraham Klein. On the analytic properties of partial wave amplitudes in Yukawa potential scattering. 1: 274—1960

Fosdick, L. D.
Ehrman, J. R., ——, and D. C. Handscomb. Computation of order parameters in an Ising lattice by the Monte Carlo method. 1: 547—1960

Garcia-Colin, Leopoldo S.
—— Pair distribution function of a hard sphere Bose system calculated by the pseudo-potential method. 1: 87—1960
—— **and Jean Peretti.** On the pair distribution function of a hard sphere Bose system. 1: 97—1960

Gel'fand, I. M. and A. M. Yaglom. Integration in functional spaces and its applications in quantum physics. 1: 48—1960

Girardeau, M. Relationship between systems of impenetrable bosons and fermions in one dimension. 1: 516—1960

Green, Melville S. Topological derivation of the Mayer density series for the pressure of an imperfect gas. 1: 391—1960

Green, T. A. and O. E. Lanford, III. Rigorous derivation of the phase shift formula for the Hilbert space scattering operator of a single particle. 1: 139—1960

Grossmann, A.
—— Description of the extended tube. 1: 85—1960
—— Algebraic characterization of the TCP operation. 1: 424—1960

Handscomb, D. C.
Ehrman, J. R., L. D. Fosdick, and ——. Computation of order parameters in an Ising lattice by the Monte Carlo method. 1: 547—1960

Henin, F.
Prigogine, I. and ——. On the general theory of the approach to equilibrium. I. Interacting normal modes. 1: 349—1960

Kalaba, Robert
Bellman, Richard, ——, and G. Milton Wing. Invariant imbedding and mathematical physics. I. Particle processes. 1: 280—1960

Klein, Abraham
—— Mandelstam representation for potential scattering. 1: 41—1960
Aaron, Ronald and ——. Convergence of the Born expansion. 1: 131—1960
Fivel, Daniel I. and ——. On the analytic properties of partial wave amplitudes in Yukawa potential scattering. 1: 274—1960

Lanford, O. E., III
Green, T. A. and ——. Rigorous derivation of the phase shift formula for the Hilbert space scattering operator of a single particle. 1: 139—1960

Author Index to Volume 1

Analytic Subject Index to Volume 1

Analysis

Differential Equations

Asymptotic solutions of differential equations with transition points or singularities, A. Erdélyi. 1: 16—1960

Variational method for studying the motion of classical vibrating systems, J. M. Luttinger and R. B. Thomas, Jr. 1: 121—1960

Function Space Integration

Integration in functional spaces and its applications in quantum physics, I. M. Gel'fand and A. M. Yaglom. 1: 48—1960

Lagrange Expansion

Generalization of the Lagrange expansion with application to physical problems, P. A. Sturrock. 1: 405—1960

Continuum Physics, Classical

Dimensional changes in crystals caused by dislocations, R. A. Toupin and R. S. Rivlin. 1: 8—1960

Electrical conduction in deformed isotropic materials, A. C. Pipkin and R. S. Rivlin. 1: 127—1960

Galvanomagnetic and thermomagnetic effects in isotropic materials, A. C. Pipkin and R. S. Rivlin. 1: 542—1960

Field Theory, Quantum

Axiomatic Approach

Description of the extended tube, A. Grossman. 1: 85—1960

Generalization of the "edge-of-the-wedge" theorem, H. Epstein. 1: 524—1960

Hamiltonian formalism and the canonical commutation relations in quantum field theory, H. Araki. 1: 492—1960

On the many-particle structure of Green's functions in quantum field theory, K. Symanzik. 1: 249—1960

Quantization of nonlinear systems, I. E. Segal. 1: 468—1960

Quantum Electrodynamics

Approximate solutions of the Bethe-Salpeter equation, S. H. Vosko. 1: 505—1960

Gauge properties of propagators in quantum electrodynamics, Bruno Zumino. 1: 1—1960

Quantum Field Theory, General Aspects

Analyticity of the fourth order scattering amplitude with two complex invariants, Jan Tarski. 1: 149—1960

Double commutator in quantum field theory, R. F. Streater. 1: 231—1960

"Front" description in relativistic quantum mechanics, R. Acharya and E. C. G. Sudarshan. 1: 532—1960

Kemmer wave equation in Riemann space, Adel da Silveira. 1: 489—1960

Singularities and discontinuities of Feynman amplitudes, R. E. Cutkosky. 1: 429—1960

Group Theory and Symmetry Operations

Group Characters and Representations

Method to obtain the character tables of nonsymmorphic space groups, J. Zak. 1: 165—1960

Real representations of coordinate rotations, U. Fano. 1: 417—1960

Symmetry-adapted functions belonging to the symmetric groups, Harold V. McIntosh. 1: 453—1960

Lorentz Group

Decomposition of direct products of representations of the inhomogeneous Lorentz group, J. S. Lomont. 1: 237—1960

Symmetry Operations

Algebraic characterization of the TCP operation, A. Grossman. 1: 424—1960

Normal form of antiunitary operators, Eugene P. Wigner. 1: 409—1960

Phenomenological distinction between unitary and antiunitary symmetry operators, Eugene P. Wigner. 1: 414—1960

Real representations of coordinate rotations, U. Fano. 1: 417—1960

Spacetime of the elementary particles, R. Finkelstein. 1: 440—1960

Lattice Dynamics

On the general theory of the approach to equilibrium. I. Interacting normal modes, I. Prigogine and F. Henin. 1: 349—1960

Poincaré cycles, ergodicity, and irreversibility in assemblies of coupled harmonic oscillators, Peter Mazur and Elliott Montroll. 1: 70—1960

Statistical dynamics of simple cubic lattices. Model for the study of Brownian motion, Robert J. Rubin. 1: 309—1960

Zero-point energy of an electron lattice, Rosemary A. Coldwell-Horsfall and Alexei A. Maradudin. 1: 395—1960

Matrices

On the calculation of the inverse of the overlap matrix in cyclic systems, P. O. Löwdin, R. Pauncz, and J. de Heer. 1: 461—1960

Some remarks concerning the real and imaginary parts of the characteristic roots of a finite matrix, Daniel C. Lewis, Jr., and Olga Taussky. 1: 234—1960

Plasmas, Electron

Linearized plasma oscillations in arbitrary electron velocity distributions, George Backus. 1: 178—1960

Zero-point energy of an electron lattice, Rosemary A. Coldwell-Horsfall and Alexei A. Maradudin. 1: 395—1960

Relativity, General

Consistency of the canonical reduction of general relativity, R. Arnowitt, S. Deser, and C. W. Misner. 1: 434—1960

On the nonexistence of a class of static Einstein spaces asymptotic at infinity to a space of constant curvature, H. A. Buchdahl. 1: 537—1960

Problem of Rainich for two-component spinors, Otto Bergmann. 1: 172—1960

Spacetime of the elementary particles, R. Finkelstein. 1: 440—1960

Scattering Theory

Elementary Scattering Processes

Analyticity of the fourth order scattering amplitude with two complex invariants, Jan Tarski. 1: 149—1960

Potential Scattering

Analytic properties of radial wave functions, Roger G. Newton. 1: 319—1960

Convergence of the Born expansion, Ronald Aaron and Abraham Klein. 1: 131—1960

Mandelstam representation for potential scattering, Abraham Klein. 1: 41—1960

Minimum property in the Hulthén-type variational methods, Takashi Ohmura. 1: 27—1960

On the analytic properties of partial wave amplitudes in Yukawa potential scattering, Daniel I. Fivel and Abraham Klein. 1: 274—1960

Rigorous derivation of the phase shift formula for the Hilbert space scattering operator of a single particle, T. A. Green and O. E. Lanford, III. 1: 139—1960

Stationary expression for effective range, Takashi Ohmura. 1: 35—1960

Statistical Mechanics, Equilibrium Theory and the Many-Body Problem

Ergodic Theory

Ergodicity conditions in quantum mechanics, G. M. Prosperi and A. Scotti. 1: 218—1960

New theorem in the classical ensemble theory, S. Albertoni, P. Bocchieri, and A. Loinger. 1: 244—1960

Partition Function, Distribution Functions and Macroscopic Properties

Combinatorial aspects of the Ising model for ferromagnetism. I. A conjecture of Feynman on paths and graphs, S. Sherman. 1: 202—1960

Computation of order parameters in an Ising lattice by the Monte Carlo method, J. R. Ehrman, L. D. Fosdick, and D. C. Handscomb. 1: 547—1960

Nodal expansions. III. Exact integral equations for particle correlation functions, Emmanuel Meeron. 1: 192—1960

On the pair distribution function of a hard sphere Bose system, Leopoldo S. Garcia-Colin and Jean Peretti. 1: 97—1960

Pair distribution function of a hard sphere Bose system calculated by the pseudo-potential method, Leopoldo S. Garcia-Colin. 1: 87—1960

Relationship between systems of impenetrable bosons and fermions in one dimension, M. Girardeau. 1: 516—1960

Topological derivation of the Mayer density series for the pressure of an imperfect gas, Melville S. Green. 1: 391—1960

Statistical Mechanics, Nonequilibrium Theory

Differential-operator approximations to the linear Boltzmann equation, Armand Siegel. 1: 378—1960

Formal solution of Liouville's equation, Oldwig von Roos. 1: 107—1960

Liouville equation and the resolvent formalism, S. Teitler and R. F. Wallis. 1: 372—1960

On the general theory of the approach to equilibrium. I. Interacting normal modes, I. Prigogine and F. Henin. 1: 349—1960

Poincaré cycles, ergodicity, and irreversibility in assemblies of coupled harmonic oscillators, Peter Mazur and Elliott Montroll. 1: 70—1960

Solution of the collisionless Boltzmann equation using a diagram technique, Oldwig von Roos. 1: 112—1960

Statistical dynamics of simple cubic lattices. Model for the study of Brownian motion, Robert J. Rubin. 1: 309—1960

Thermodynamics

Proof of Carathéodory's local theorem and its global application to thermostatistics, B. Bernstein. 1: 222—1960

Transport Equations

Differential-operator approximations to the linear Boltzmann equation, Armand Siegel. 1: 378—1960

Invariant imbedding and mathematical physics. I. Particle processes, Richard Bellman, Robert Kalaba, and G. Milton Wing. 1: 280—1960

Numerical integration of the transport equation with no angular truncation, Herbert S. Wilf. 1: 225—1960
